5. Research, Conservation and Community

Participants are required to support forest research to improve forest health, productivity, and sustainable management of forest resources, and the environmental benefits and performance of forest products. Complete the following table with research funding dollars spent to meet this requirement.

I. Research Funding

Research Funding Category	Internal USD	External USD	Internal CAD	External CAD
Forest health, productivity, and ecosystem functions	88556	144546		
Chemical efficiency, use rate and integrated pest management	0	0		
Water quality and/or effectiveness of best management practices including effectiveness of water quality and best management practices for protecting the quality, diversity and distributions of fish and wildlife habitats	90968	0		
Wildlife management at stand and landscape levels	220847	0		
Conservation of biological diversity	82798	0		
Ecological impacts of bioenergy feedstock removals on productivity, wildlife habitat, water quality and other ecosystem functions	0	0		
Climate change research for both adaptation and mitigation	44331	0		
Forest operations efficiencies and economics	0	0		
Energy efficiency	0	0		
Life cycle assessment	0	0		
Avoidance of illegal logging	0	0		
Avoidance of controversial sources	0	0		
Other				

RESEARCH
SFI Forest Management and Fiber Sourcing \$63 MILLION
Standards in forest research in 2014 require participants to support research.
NO OTHER FORESTRY STANDARD HAS A RESEARCH REQUIREMENT.

II. Research, Conservation and Community Projects and Partnerships

If you engage in research, conservation or community projects with external partners, please complete this page. For each project, please indicate the extent to which any of the dollar amount spent by your organization is also in fulfillment of the research requirements and expenditures noted in the research funding table above. SFI recognizes that not all conservation or community partnership projects are related to research program requirements. Thus, the collective contributions of your organization in this section may not perfectly relate to the research expenditures captured in the research funding table above.

Is your organization currently involved in any conservation partnerships with non-profit organizations, academic institutions or government agencies? These could include, but are not limited to, research or direct implementation of any type of resource or biological conservation activities.

Project Name	Project Objective	Edit	Delete
Northwest Region Education and Enforcement Program (Northwest Region)	To provide sustainable recreation opportunities on DNR-managed natural resource lands, and to protect water quality and wildlife habitat.	Edit ()	Delete ()
Stand Management Cooperative Type II, Mid-rotation stand developmental dynamics in Douglas-fir and western hemlock. (Forest Resources Division- Silviculture and Monitoring Section, and Northwest Regio	Improve our understanding of how Douglas-fir and western hemlock trees and stands grow in relation to growing space. Develop an understanding of how species mixtures perform.	Edit ()	Delete ()

7. Forest Management New Standard Impacts

The SFI 2015-2019 Forest Management Standard has several new and enhanced requirements. These changes were part of the SFI 2015-2019 Standard and Rules revision process. Many of the changes came from consultations with the SFI community -- people like you.

Your answers to this survey will enable SFI to:

- · Demonstrate the value of the standard revision process and the subsequent improvements to the Standard.
- · Communicate the positive outcomes resulting from your implementation of the new Standard requirements.

We will use the information and examples you provide to elevate the awareness of the new SFI 2015-2019 Standards and Rules. Your efforts will also help us engage brandowners in a discussion about the value, relevance and credibility of the Standard.

This survey requests specific case examples of your management improvements and best practices related to the new Standard. SFI would like to use your best practice examples in communications. When asked to share your best stories, we will ask if you would like to share your organization's best practice case example. You may also opt for sharing your stories but not have your organization identified. If you prefer, we can also use your information in aggregate with all collected survey data.

These questions will be asked this year and next year (2017) only. The specific questions related to forest conversion and chemical use will be incorporated into the SFI Annual Report Form and will be asked year over year

Indicator 3.2.1

Program addressing management and protection of rivers, streams, lakes, wetlands, other water bodies and riparian areas during all phases of management, including the layout and construction of roads and skid trails to maintain water reach, flow and quality.

Indicator 3.2.2

Mapping of rivers, streams, lakes, wetlands and other water bodies as specified in state or provincial best management practices and, where appropriate, identification on the ground.

Indicator 3 2 3

Document and implement plans to manage and protect rivers, streams, lakes, wetlands, other water bodies and riparian areas.

Indicator 3.2.4

Plans that address wet-weather events in order to maintain water quality (e.g., forest inventory systems, wet-weather tracts, definitions of acceptable operating conditions).

Indicator 4.1.3

Document diversity of forest cover types and age or size classes at the individual ownership or forest tenure level, and where credible data are available, at the landscape scale.

Working individually or collaboratively to support diversity of native forest cover types and age or size classes that enhance biological diversity at the landscape scale.

Indicator 4.1.4

Program Participants shall participate in or incorporate the results of state, provincial, or regional conservation planning and priority-setting efforts to conserve biological diversity and consider these efforts in forest management planning. Examples of credible priority-setting efforts include state wildlife action plans, state forest action plans, relevant habitat conservation plans or provincial wildlife recovery plans.

Indicator 4.1.5

Program to address conservation of known sites with viable occurrences of significant species of concern

Performance Measure 8.2

Program Participants with forest management responsibilities on public lands shall confer with affected Indigenous Peoples with respect to sustainable forest management practices.

Indicator 8.2.1

Program that includes communicating with affected Indigenous Peoples to enable Program Participants to:

- · understand and respect traditional forest-related knowledge;
- · identify and protect spiritually, historically, or culturally important sites;
- address the use of non-timber forest products of value to Indigenous Peoples in areas where Program Participants have management responsibilities on public lands; and
- · respond to Indigenous Peoples' inquiries and concerns received.

Performance Measure 8.3

Program Participants are encouraged to communicate with and shall respond to local Indigenous Peoples with respect to sustainable forest management practices on their private lands.

Performance Measure 8.3.1

Program Participants are aware of traditional forest-related knowledge, such as known cultural heritage sites, the use of wood in traditional buildings and crafts, and flora that may be used in cultural practices for food, ceremonies or medicine.

Performance Measure 8.3.1

Respond to Indigenous Peoples' inquiries and concerns received.

Indicator 11.1.5

Program Participants shall have written agreements for the use of qualified logging professionals and/or certified logging professionals (where available) and/or wood producers that have completed training programs and are recognized as qualified logging professionals

Indicator 2 2 4

The World Health Organization (WHO) type 1A and 1B pesticides shall be prohibited, except where no other viable alternative is available.

Indicator 1.2.1

Program Participants shall not convert one forest cover type to another forest cover type, unless the conversion:

- 1. Is in compliance with relevant national and regional policy and legislation related to land use and forest management; and
- Would not convert native forest types that are rare and ecologically significant at the landscape level or put any native forest types at risk of becoming rare; and
 Does not create significant long-term adverse impacts on Forests with Exceptional Conservation Value, old-growth forests, forests critical to threatened and endangered species, and
 special sites.

Indicator 1.2.2

Where a Program Participant intends to convert to another forest cover type, an assessment considers:

- Productivity and stand quality conditions and impacts which may include social and economic values;
- Specific ecosystem issues related to the site such as invasive species, insect or disease issues, riparian protection needs and others as appropriate to site including regeneration challenges; and
- Ecological impacts of the conversion including a review at the site and landscape scale as well as consideration for any appropriate mitigation measures.

Indicator 1.3.1

Forest lands converted to other land uses shall not be certified to this SFI Standard. This does not apply to forest lands used for forest and wildlife management such as wildlife food plots or infrastructure such as forest roads, log processing areas, trails etc.

Protection and Maintenance of Water Resources

Has your organization made changes in your planning and operational practices to address protection of wetlands, riparian areas and water resources as required in Performance Measure 3.2?

O Yes, we have made changes based off the new Requirements in the SFI 2015-2019 Standard that address the following indicators

 $O\ \ We\ previously\ addressed\ the\ requirements\ in\ the\ SFI\ 2015-2019\ Standard\ through\ the\ following\ indicators.\ (Select\ to\ expand)$

No, we have not made changes based off the new Requirements in the SFI 2015-2019 Standard that address the above indicators.

Provide rationale

WA DNR already met the spirit of these new indicators prior to the release of the SFI 2015-2019 Standard.

Conservation of Biodiversity							
Has your organization made changes to your forest management planning and/or operational practices with respect to documenting diversity of forest cover types and age or size classes as required by Indicator 4.1.3?							
O Yes, we have made changes based off the new Requirements in the SFI 2015-2019 Standard that address the following indicators.

SFI Annual Progress Report Survey

2015 - 2019 Impacts

Impacts Optional

8. Fiber Sourcing New Standard Impacts

The SFI 2015-2019 Fiber Sourcing Standard has several new and enhanced requirements. These changes were part of the SFI 2015-2019 Standard and Rules revision process. Many of the changes came from consultations with the SFI community – people like you.

Your answers to this survey will enable SFI to:

- · Demonstrate the value of the standard revision process and the subsequent improvements to the Standard.
- · Communicate the positive outcomes resulting from your implementation of the new Standard requirements.

We will use the information and examples you provide to elevate the awareness of the new SFI 2015-2019 Standards and Rules. Your efforts will also help us engage brandowners in a discussion about the value, relevance and credibility of the Standard.

This survey requests specific case examples of your management improvements and best practices related to the new Standard. SFI would like to use your best practice examples in communications. When asked to share your best stories, we will ask if you would like to share your organization's best practice case example. You may also opt for sharing your stories but not have your organization identified. If you prefer, we can also use your information in aggregate with all collected survey data.

These questions will be asked this year and next year (2017) only. The specific questions related to forest conversion and chemical use will be incorporated into the SFI Annual Report Form and will be asked year over year.

Indicator 1.1.1

Program participant shall address conservation of biodiversity, individually or collaboratively, through a Program which includes one or more of the following:

- promotion of biological diversity utilizing information from organizations such as World Resources Institute, The Nature Conservancy, NatureServe, Conservation International, State Wildlife Action Plans, State Forest Action Plans and assessments;
- conducting local and regional level landscape assessments;
- · involvement with local or regional conservation efforts;
- · use of relevant information on biological diversity from credible sources (such as those noted above) in approved training and education programs; and other credible approaches.

Indicator 2.1.2

Use of written agreements for the purchase of raw material sourced directly from the forest is required and must include provisions requiring the use of best management practices.

Indicator 6.1.5

Program Participants shall have written agreements for the use of qualified logging professionals and/or certified logging professionals (where available) and/or wood producers that have completed training programs and are recognized as qualified logging professionals.

Indicator 4 1 4

Program to assess the risk that the Program Participant's fiber sourcing program could acquire material from illegal logging by considering some of the following:

- · communications with suppliers;
- · independent research;
- · contract documentation; and
- · maintain records.

Indicator 12.1.1

Process to assess the risk that the Program Participant's fiber sourcing program could acquire material from illegal logging such as consulting information from the World Resources Institute Risk Information Tool, the World Bank Legal Rights Index. or Transparency International.

Biodiversity in Fiber Sourcing

Have you made changes to your fiber procurement planning and practices with respect to conservation of biodiversity in fiber sourcing according to Indicator 1.1.1?

O Yes, we have made changes based off the new Requirements in the SFI 2015-2019 by partnering with or using information from the following organizations:					
Select all that apply					
☐ World Resources Institute Risk					
☐ The Nature Conservancy					
☐ Conservation International					
☐ State Wildlife Action Plans					
☐ State Forest Action Plans and assessments					
□ NatureServe					
Other					
O We previously addressed the requirements in the SFI 2015-2019 Standard					
O No, we have not made changes based off the new Requirements in the SFI 2015-2019 Standard that address the above indicator.					
O We have another mechanism					
Best Management Practices in Fiber Sourcing					
Have you made changes to your fiber procurement planning and practices with respect to best management practices in fiber sourcing according to Indicator 2.1.2?					
O Yes, we have made changes based off the new Requirements in the SFI 2015-2019 for use of best management practices in written agreements for raw material which:					
Select all that apply					
☐ Are now contained in purchase order					
☐ Are now contained in purchase contract					
☐ Are now contained in another format					
O We previously addressed the requirements in the SFI 2015-2019 Standard for use of best management practices in written agreements for raw material					
O No, we have not made changes based off the new Requirements in the SFI 2015-2019 Standard that address the above indicators.					
O We have another mechanism					
Training and Education					
Have the changes to Indicator 6.1.5 helped to improve your fiber procurement planning and practices with respect to the training and education of qualified professionals or wood					
producers?					
O Yes, we have made changes based off the new Requirements in the SFI 2015-2019 Standard that address the following indicators.					
Select all that apply					
Are now factored into purchase contracts					
☐ Are now factored into purchase orders					
O We previously addressed the requirements in the SFI 2015-2019 Standard for the use of qualified logging professionals and/or certified logging professionals and/or wood producers by factoring them into purchase orders					
O No, we have not made changes based off the new Requirements in the SFI 2015-2019 Standard that address the above indicators					
O We have another mechanism					
In your opinion, has the number of trained wood producers in the region of your manufacturing facilities changed as compared with last year?					
O Increased O Decreased O Remained the same					
Thirteased Decreased Themanied the same					
Avoidance of Illegally Logged Fiber					
Avoidance of megany Logged Fiber					
The SFI 2015-2019 Fiber Sourcing Standard also has specific new performance measures related to avoiding illegally logged fiber. This is an important topic for brand-owners and the conservation community. They are seeking to reduce the brand and conservation risks associated with illegal logging. These new requirements are designed to help Program Participants identify and manage the risks associated with illegally logged fiber. SFI Inc. would like to better understand how Program Participants are managing these risks. We would also like to identify any changes that may have occurred to your procurement planning and/or operational practices as a result of the new Standard.					
Legal and Regulatory Compliance (within the US and Canada)					
Did you identify any rick of illegal legging through your rick access == 12					
Did you identify any risk of illegal logging through your risk assessment?					
O Yes O No					
Avoidance of Controversial Sources Including Illegal Logging (outside of the US and Canada)					
Do you source fiber from outside the U.S. and Canada?					
O Yes O No					
During your process to avoid sourcing illegally logged fiber by assesses and mitigating risk within your fiber sourcing program, what tools did you use?					
Select all that apply					

☐ World Resources Institute Risk Information Tool			
☐ The World Bank Legal Rights Index			
☐ Information from Transparency International
