| <b>Data Description</b> : The PI and other members of th  | e Project Team principally Mrs Alvis a UW doctoral  |  |  |  |  |  |
| candidate, are writing a paper discussing the results   | s of the Roads Prescription-Scale Effectiveness   |  |  |  |  |  |
| Monitoring Project's Road Micro-Topography Evo  | itoring Project's Road Micro-Topography Evolution parameterization experiment. This paper,  |  |  |  |  |  |
| rently entitled Temporal evolution of forest road micro-topography and flow pathways, discusses using   |   |  |  |  |  |  |
| occupied aerial vehicle (UAV) structure-from-motion (SfM) technology to examine how wheel ruts          |   |  |  |  |  |  |
| lve on mainline logging roads following road grading and the implications of said rut formation on the  |   |  |  |  |  |  |
| ad surface drainage system. This paper will be submitted to a peer-reviewed journal by June 2024 at the |   |  |  |  |  |  |
| latest (exact journal and date TBD).  |   |  |  |  |  |  |
| Below are the figures and tables presented in the cu  | irrent naner draft. The figures may change slightly as  |  |  |  |  |  |
| edits to the paper are made, but the content should   | ures and tables presented in the current paper draft. The figures may change slightly as<br>are made, but the content should remain largely the same.<br>presents a map of the field sites. |  |  |  |  |  |
| <ul> <li>Figure 1 presents a map of the field sites.</li> </ul>   |   |  |  |  |  |  |
| <ul> <li>Table 1 denotes seasons, dates, types, and times since baseline at each field site.</li> </ul> |   |  |  |  |  |  |
| • Figures 2-6 are presented to help explain da  | Figures 2-6 are presented to help explain data processing and analysis methods.   |  |  |  |  |  |
| • Figure 2 shows example orthoimages and digital elevation models (DEMs) overlaying                     |   |  |  |  |  |  |
| hillshades for the first survey at each field site.   |   |  |  |  |  |  |
| • Figure 3 shows example difference maps for wet season year 2 (WSYR2) at one of the                    |   |  |  |  |  |  |
| field sites (MEL-14) for both pre-  | and post-Gaussian filtering.  |  |  |  |  |  |
| • Figure 4 shows example cross-sectional profiles of unoccupied aerial vehicle (UAV)-                   |   |  |  |  |  |  |
| Eigure 5 shows example empirical  | IKZ.  |  |  |  |  |  |
| at MFL-14 for WSVR2 with a line   | e denoting the $5^{\text{th}}$ percentile, which is used as a measure   |  |  |  |  |  |
| of rut incision.  | e denoting the 5° percentile, which is used as a measure  |  |  |  |  |  |
| • Figure 6 shows example drainage a   | area maps for each of the surveys during WSYR2 at   |  |  |  |  |  |
| MEL-14 developed using a Landla   | b flow routing component.   |  |  |  |  |  |
| • Figure 7 is a schematic showing potential flow pathways for an idealized road surface and a rutted    |   |  |  |  |  |  |
| road surface to help explain the implication  | ns of rut evolution.  |  |  |  |  |  |
| • Table 2 and Figures 8-10 are the main results of the study.   |   |  |  |  |  |  |
| $\circ$ Table 2 lists the maximum rut incis   | sion depth in centimeters for all three seasons at each   |  |  |  |  |  |
| Figure 8 shows the relationship het   | ween rut incision denth in meters and time since  |  |  |  |  |  |
| grading in months for both field sit  | res. This demonstrates the rate of rutting  |  |  |  |  |  |
| $\circ$ Figure 9 shows the relationship bet   | tween the normalized drainage area center of mass   |  |  |  |  |  |
| $(CM_{da})$ and time since grading in n   | nonths for both field sites with respect to the   |  |  |  |  |  |
| normalized drainage area center of  | mass for an ideal surface.  |  |  |  |  |  |
| • Figure 10 shows the relationship be   | etween fraction of total drainage exiting through the   |  |  |  |  |  |
| lowest boundary of the road segme   | ent $(R_{da})$ and time since grading in months for both field  |  |  |  |  |  |
| sites. This is a way to measure the   | impact of ruts on flow pathways.  |  |  |  |  |  |
| One more figure may be included in future iterations of the paper that shows the impact of ruts on an   |   |  |  |  |  |  |
| erosion index of the road surface but requires furthe   | are may be included in future iterations of the paper that shows the impact of ruts on an<br>of the road surface but requires further discussion among co-authors.                          |  |  |  |  |  |

erosion index of the road surface but requires further discussion among co-authors.

**Figure 1.** Map of field site locations in Washington state. Inset A zooms in on MEL-14, the field site in the siltstone lithology and inset B zooms in on KID-13, the field site in the volcanic lithology.

| Site       | Season                       | Date of survey | Type of survey | Time since baseline   |
|------------|------------------------------|----------------|----------------|-----------------------|
