

## Sheet 1. Shallow landslide vulnerability during a dry period for a Cascadia subduction zone magnitude 9+ earthquake for the Ocean Shores and Westport Peninsulas, Grays Harbor County, Washington

by

Stephen L. Slaughter, Timothy J. Walsh, Anton Ypma, and Recep Cakir

July 2014

Shallow landslide vulnerability for the Ocean Shores (Map A) and Westport (Map B) Peninsulas is based on the critical acceleration ( $a_c$ ) of slopes by ground motions that the region might experience from a Cascadia subduction zone magnitude 9+ earthquake. The hazard ratings are qualitative indicators based on the difference between the  $a_c$  and peak ground acceleration (PGA) for each grid. High hazard is an  $a_c$  less than 0.2 g, medium hazard is an  $a_c$  between 0.2 g and 0.3 g, and low hazard is an  $a_c$  between 0.3 g and 0.4 g; slopes greater than 0.4 g were not rated. Different methods of analysis were used for the uplands that consist of soil overlying bedrock and the lowlands that consist of sand and beach sand.

This plate represents dry conditions where groundwater is 3 ft below the surface in the uplands and below the landslide failure plane in the lowlands. The uplands and lowlands are divided by a dashed gray line. Groundwater depth was assumed to be uniform for each area of analysis.

Lambert conformal conic projection  
North American Datum of 1983  
Shaded relief generated from U.S. Geological Survey 10 meter digital elevation model;  
sun azimuth 315°; sun angle 45°  
Digital cartography and GIS by Stephen L. Slaughter, Ian J. Hubert, and Anne C. Olson  
Editing and production by Jarett M. Rudolf

Tsunami evacuation routes and post-tsunami evacuation areas are not intended for emergency use and are included for reference purposes only. The objective of these maps is to assist city and emergency management officials in evaluating the suitability of existing evacuation routes and assembly areas for potential vulnerability to ground failure from a M9+ CSZ earthquake. Results of this report could necessitate modifying, adding, or removing current tsunami evacuation routes and/or post-tsunami assembly areas.
