

GLACIER PEAK

Are You Volcano Ready?

Around 13,000 years ago, Glacier Peak produced one of Washington's largest eruptions, with ash fall many times more voluminous than at Mount St. Helens in 1980. Volcanic mudflows (lahars) have infilled nearby valleys far downstream. While quiet for the past 300 years, future eruptions could resemble those of the past.

- Get to know your local volcano's hazards
- Register for notifications about the volcano's activity
- Make a plan to prepare your entire family for any emergency
