Washington Natural Heritage Program
List of Animal Species with Ranks
September 2025

The following list of animals known from Washington is complete for resident and transient vertebrates and several groups of invertebrates, including odonates, branchipods, tiger beetles, butterflies, gastropods, freshwater bivalves and bumble bees. Some species from other groups are included, especially where there are conservation concerns. Among these are the Palouse giant earthworm, a few moths and some of our mayflies and grasshoppers.

Conservation status, in the form of range-wide, national and state ranks are assigned to each taxon. Information on species range and distribution, number of individuals, population trends and threats is collected into a ranking form, analyzed, and used to assign ranks. Ranks are updated periodically, as new information is collected. We welcome new information for any species on our list. **PLEASE NOTE:** We have not had a zoologist on staff since 2017. Taxonomy, Global Rank, State Status, and Federal Status have been updated, but the State Rank has only been reevaluated for two species, Monarch Butterfly and Tricolored Blackbird.
