

20-Year Forest Health Strategic Plan:

Restoration Need and Treatment Progress

Eastern Washington Forest Health Priority Planning Areas

Scientists Assess Forest Health Treatment Need in Planning Areas

Eastern Washington Forest Health Priority Planning Areas

Treatment Target

1.1 to 1.6 million

footprint acres in priority planning areas require a variety of treatments to restore resilient forest conditions.

Thinning

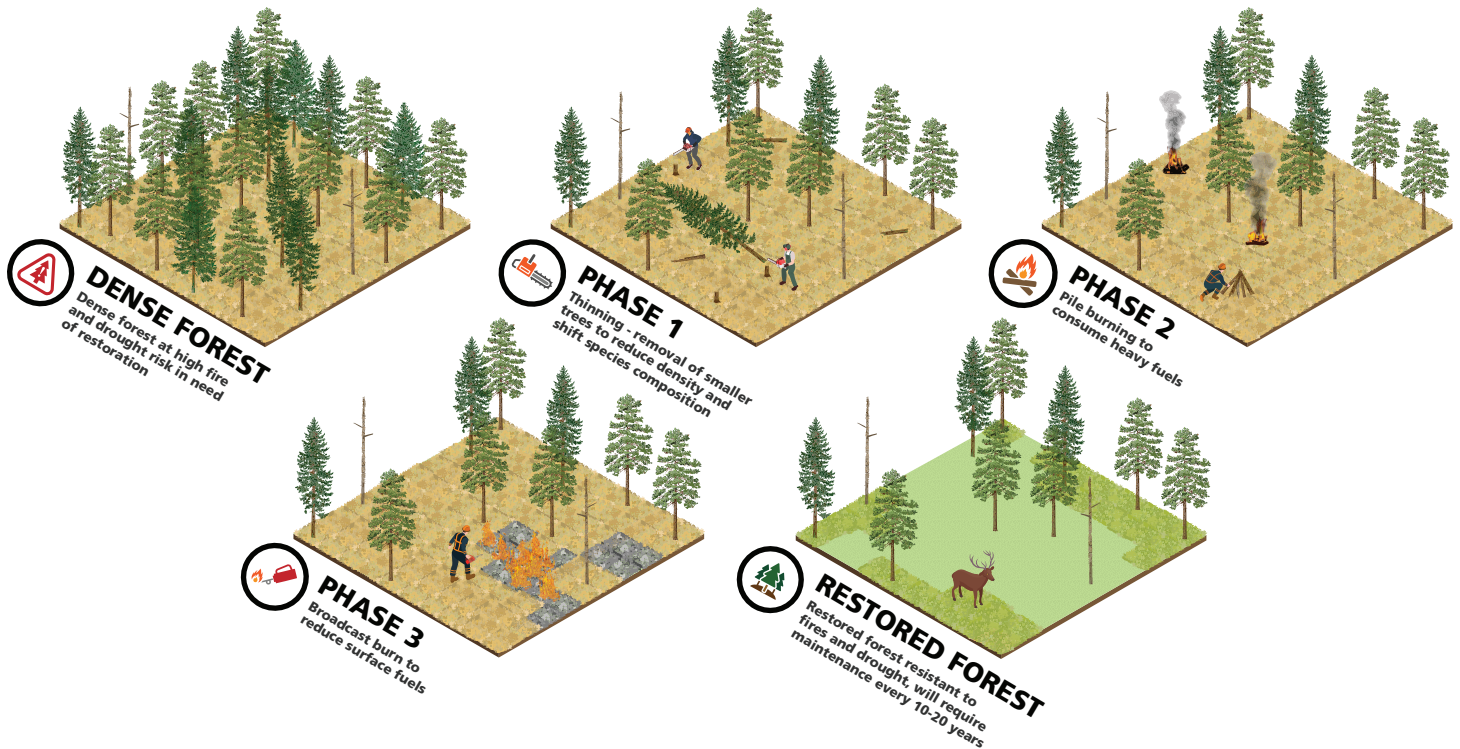

Prescribed Fire

Wildfire

Treatment Sequence to Restore Resilient Forest Conditions

Treatment Progress
2017-2024

534,000

reported forest health total treatment acres implemented to restore forest health in priority planning areas.

251,000

reported forest health treatment footprint acres implemented to restore forest health in priority planning areas.
